EDUCATION

New York University — New York, NY
M.S. in Computing, Entrepreneurship, and Innovation — *December 2027*
Relevant Coursework: Design and Innovation, Strategy, Entrepreneurship, and Foundations of Networks and Mobile Systems

University of Miami — Coral Gables, FL
B.A. in Computer Science and B.S.C. in Immersive Media — *May 2026*
GPA: 3.65/4.00

EXPERIENCE

Sal Amore — Nantucket, MA
Digital Product & Marketing Intern — June 2026 – August 2026
- Redesigned Shopify storefront workflows by modifying Liquid theme components and applying customer-centered UX principles, simplifying navigation and improving product discovery across the e-commerce journey.
- Analyzed digital engagement metrics to guide content and growth decisions, increasing social media platform audiences by 46% and 20% while generating 1,100+ new followers.

Generation Conscious — Miami, FL
UX Design & Research Intern — May 2025 – December 2025
- Synthesized quantitative and qualitative customer research into product requirements, UX recommendations, and Figma wireframes to improve the digital and physical refill experience.

Product Manager Intern — January 2025 – December 2025
- Evaluated refill-station hardware, software, user feedback, and adoption data to identify product issues, prioritize improvements, and present actionable recommendations to stakeholders.
- Developed six localized campaigns from customer insights, increasing refill-station utilization by 64% and converting 21%+ of campus users to sustainable detergent-sheet refills.

Communication Technology Services — Marlborough, MA
Website Design Intern — June 2024 – December 2024
- Redesigned and re-engineered the website from Squarespace 7.0 to 7.1 for a 400-employee company with 14,000+ completed projects, improving usability and organic visibility.

Systems, Network, and Desktops Intern — May 2024 – August 2024
- Configured laptops, accounts, and software for 100+ employees, streamlining onboarding and improving operational efficiency.
- Administered ShareFile permissions for 100+ users, strengthening access controls and data security.

SELECTED PROJECTS

FestivalLink | iOS App for Offline Festival Connectivity (In Development)
- Defining and building a SwiftUI iPhone app that helps friends find each other at festivals when cell service fails, scoping features around user needs, privacy, and technical constraints.
- Developing peer-to-peer connectivity with Apple's MultipeerConnectivity framework, with last-known locations and group chat planned for testing with real users.

Luke's Command Center | Full-Stack and Agentic AI Application
- Designed and built an end-to-end web application with React, FastAPI, REST APIs, and MongoDB Atlas, implementing JWT authentication, Argon2 password hashing, API validation, and user-level access controls.
- Developed and tested an AI-powered research tracker that searches and evaluates emerging festival-connectivity technologies through budget-controlled agent workflows, persistent tracking data, automated reports, and runtime guardrails.

Crash Loop | Unity VR Escape-Room Experience
- Led a six-person team through the semester-long design and development of a multi-room physical and VR escape-room experience, planning project scope, assigning responsibilities, and conducting weekly progress reviews.
- Developed VR interactions and narrative puzzles in Unity using C# and Unity Store assets; refined the experience through multiple rounds of testing with students and faculty before presenting it at the University of Miami's Miami XR event.

SKILLS

Product & Design: Figma, Adobe Substance 3D, Canva, Blender, Maya, Unity, Shopify Liquid, Squarespace

Data & Productivity: Tableau, Google Workspace, Microsoft 365 (Excel, PowerPoint, Word), SQL, MATLAB

Programming & Development: Python, Swift, SwiftUI, HTML, Xcode, C#, Git/GitHub, MongoDB Atlas, Visual Studio Code
